

Corporate Social Responsibility (CSR) Policy

*When using the terms “we”, “our”, “us” in this policy –we are referring to the company AS Einar Kunsts ETF also referred to as **aseke**.*

The purpose of this CSR policy is to inform about our dedication to a positive impact on the environment. It is critical that we, as a family-owned company, assume accountability for making sure the environment is preserved for coming generations. As a result, we strive to make sure that the lowest possible imprint is left both at sea and on land by our acts, services, and goods. We are constantly searching for new ways to make sustainability even more effective and environmentally beneficial in our day-to-day operations.

Stakeholders

aseke’s stakeholders include our suppliers, customers, employees, regulators, competitors, and local communities.

aseke’s most prioritized and relevant goals in accordance with UN’s Sustainable Development:

We will always strive to preserve the environment, within the constraints of our operations:

- We will put in place sensible policies that protect the environment and help ensure that energy and other resources are used as efficiently as possible within the constraints of the economy.
- As per the rules and regulations, we must always comply with the environmental requirements.
- We will always aim to make our products highly durable to promote longer product life cycles, safer working environments, and more responsible solutions for all our customers.
- Through methodical environmental management in operation, maintenance, and development initiatives, we will strive for greater environmental efficiency in our own activities.
- When making purchases of goods and services, we need to be very upfront about our environmental standards and make sure each of our vendors are following them.
- We will encourage ecologically responsible behavior and make our environmental work obvious to all stakeholders of our business operations.
- We must do routine checks and follow-ups to ensure that our suppliers operate in an ethical, sustainable, and ecologically friendly manner.

Action plan

- We aim to gather quality data to track our Co2 emissions for all our products.
- We plan to implement a new system for tracking the CO2-emmission overview for all the company’s operations within 2025.
- We will frequently evaluate if the company should develop a Supplier Code of Conduct.
